## Beschreibung

### 10th Workshop - Asphere Metrology on Joint Investigations

The immense interest shown in our round robin “Asphere Metrology” was confirmed once again at the [8th High Level Expert Meeting \(HLEM\) - Asphere Metrology in March 2015](#). Due to the strong demand in the aftermath of this event, a new workshop will be held again in March 2016. In addition to presentations on measurements, theoretical presentations complement the program.

Accompanying the workshop, institutions from research and industry inform you about the different technologies, systems, abilities as well as the latest developments in an exhibition.

- **Would you like to participate with measurements?**

The image shows the detailed programme for the 10th Workshop 2016 - Asphere Metrology, held from Tuesday, 8 March 2016 to Thursday, 10 March 2016. The programme is divided into three main sections: Tuesday, Wednesday, and Thursday. Each section lists the time, the topic of the session, and the speakers. The topics include 'Arrival - Early Registration', 'Conference Part 1', 'Registration, Lunch and Table Top Presentations', 'Conference Closing and Overview', 'Breakfast - Related Topics and Additional Contributions', 'The Expected Next 10 Contributions from President', 'Workshop and Exhibition Opening', 'Workshop - Metrology of Freeform Aspheres', 'Conference Part 2', 'Lunch and Table Top Presentations', 'Conference Part 3', 'Lunch and Table Top Presentations', 'Disruption', and 'Conference Closing'.

- **Would you like to hold a theoretical lecture?**
- **Would you like to represent your institution in the industrial exhibition?**
- **Are you generally interested in participating?**

## The Samples

In several preceding workshops and High Level Expert Meetings (HLEM), asphere and free form metrology, supported by two round robin measurements, has been presented and discussed within the international community.

Starting 1. September 2014 interested organizations had the opportunity to measure the [four new selected aspheres](#) (for each a CGH is available). These samples have even higher requirements and more precise specifications.

Especially the presentation of the measurement-results during our upcoming conference promises again to become very interesting. The performed measurements will be presented during the meeting. Also the presentation of comparison from all measurement results (from 4 new aspheres) will be absorbing. Contributions on calibration methods for cylindrical optics, the measurement of free-form surfaces, simulations for optical metrology, discussions on the specific presentations as well as discussions on future steps in general will complete the conference. You receive the detailed programme in our [download area](#) or by [this link](#).

## Key Dates
